Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
neoplastic disorders, leukaemia, carcinoma, sarcoma or metastatic disorders). They are also useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing, forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics), and in methods of treatment (e.g. therapeutic and prophylactic). The sequences may also be used to screen public databases to identify other family members or related sequences. The polypeptide sequences are useful as immunogens to generate antibodies that bind the polypeptides. The polypuclective genes on a chromosome, identifying gene regions associated with cellular proliferative or differentiative disorders, and in gene therapy. The present sequence encodes human GFCRK 69087
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to the isolation of a novel human G protein coupled receptor (GPCR) kinase (GPCRK) designated 69087), a novel human nuclear signalling protein designated 1581, and a novel human nuclear signalling protein kinase (MAPK) phosphatase MAPKP designated 15418, and the polynucleotide sequences encoding them. The sequences of the invention are useful for treating and disgnosing disorders such as cellular proliferative and differentiative disorders (e.g. haematopoietic neoplastic disorders, leukaemia, carcinoma, sarcoma or metastatic

cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, neuroprotective, immunosuppressive, haemostatic, antiinflammatory, cardiant, antiulcer, virucide, antithyroid, cerebroprotective, amorectic, and metabolic. Polypeptides and polynucleotides of the invention are useful in the treatment, or as a vaccine in the prevention of, cancer, wound healing disorders, infection, atherosclerosis, Parkinson's disease and Alzheimer's disease, autoimmune disorder, haematopoietic disorder, inflammation, neophastic diseases, nervous system related disorders and cardiovascular disorders, pancreatitis, respiratory disorder, hyperproliferation, systemic autoimmune disease, hyper-immunity, developmental abnormality, gastrointestinal ulceration, neuropathy, haematological diseases, metabolic diseases, sperm dysfunction, thyroid diseases, sperm dysfunction, thyroid
                disorders e.g. hypothyroidism, brain damages, colitis, cone photo-
transduction deficiency, neurological diseases, stroke, angiogenes
                                                                                                                                                                                                                                                              The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. Activity of polypeptides of the invention may be described as,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      19-MAR-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Yue H, Lal P, Bandman O, Borowsky ML, Au-Young J, Lu Y; Gandhi AR, Tribouley CM, Walia NK, Yao MG, Lu DAM, Greenwald SR Ramkumar J, Griffin JA, Kearney L, Burford N, Nguyen DB, Tang Y Baughn MR, He A, Thornton M, Hafalia A, Patterson C, Gururajan Lo TP, Khan F, Recipon SA, Azimzai Y, Policky JL, Ding L; Grether M, Elliott VS, Thangavelu K, Batra S, Ison CH;
                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition containing pKIN agonist is useful for treating a disease or condition associated with decreased expression of pKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of pKIN. The disease or condition associated with overexpression of pKIN. The disease or condition associated with overexpression with the proposed pkin and the protein associated with overexpression of pKIN. The disease include cancer (leukaemia, adenocarcinoma, lymphoma, melanoma, myeloma, sarcoma, teratocarcinoma, Hodgkin's disease); immune disorder protein and the pKIN agonist is useful for treating a disease or condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polypeptides, useful for diagnosing, treating or preventing died growth and development, cardiovascular and lipid, and diseases cancer, comprise human kinase polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          14-JUN-2001; 2001WO-US019444
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WO200196547-A2
